

S/TD
4272259CONFIDENTIALApril 23rd, 1959COCOM Document No. 3502BCOORDINATING COMMITTEEMEMORANDUM BY THE FRENCH DELEGATIONEXPORT OF ELECTRONIC VALVES TO POLAND

The French Delegation have the honour to inform the Committee that they have been asked to approve the issue of an export licence for electronic valves to a total value of \$34,500, to be delivered to Poland.

These valves, which are covered by embargo Item 1558, comprise the following:

- 150 valves type 3124 A, value \$6,000 (T.R. tuneable valves, frequency range 8,490 to 9,600 MHz and peak power from 5 to 100 Kw);
- 150 valves type 4135 A, value \$3,000 (A.T.R. valves, frequency range 9,000 to 9,600 MHz, and peak power from 5 to 250 Kw);
- 150 valves type 1725 A, value \$16,500 (magnetron valves having a fixed frequency); oscillation frequency from 9,345 to 9,405 MHz; peak power 40 Kw);
- 150 valves type 2225, value \$9,000 (reflex Klystron valves, oscillation frequency from 8,500 to 9,600 MHz; output impedance: 700 ohms).

These valves are said to be intended for fitting on to apparatus for the equipment of Polish civil transport aircraft. From the number of items specified, there would seem to be no question of their being used in aerodrome radar installations.

The French Delegation would be glad if the Committee would make known their views regarding this export as soon as possible.
